# Focus on engineering

The Basque Country has strong industrial and engineering competences in solar PV.

The Basque Country has developed powerful industrial and engineering competences in the solar PV sector, supported by an innovative and competitive supply chain. Specialized both in self consumption plants for industrial users as well as utility-scale PV power plants.

The Basque Country is home to more than 50 companies with a clear focus on engineering and manufacturing of systems and components.

Those companies cover relevant segments of the value chain, such as the engineering and installation of the PV plants, components for the Balance of System (BoS), operation and maintenance.
